Outdoor gerberas

Substrate

Substrate for transplanting

- Use a thoroughly draining and coarse substrate to achieve successful root development.
- PH gift between 5,5 – 5,8
- EC gift around 1,0 – 1,5
- Monitor the PH levels; elevated PH may result in chlorotic foliage.

Pots size

Irrigation

Recommended nutrition

EC gift

Start phase 1-6 weeks: 1,5 - 2,0

Flowering phase: 2,0 - 2,8

pH	NH ₄ ppm	K ppm	Ca ppm	Mg ppm	NO ₃ ppm	CL ppm	SO ₄ ppm	P ppm	Fe ppm	Mn ppm	Zn ppm	B ppm	Cu ppm	Mo ppm
5,7	9	196	188	44	682	60	192	56	2,24	0,27	0,33	0,38	0,06	0,10

Depending on PH gift and water quality

Optimal climate

1-3	Day & night 15-20°C	<80%	300 watt/m ² 30.000 lux/2.750 f.c.
4-6	Day & night 12-18°C	<80%	400-500 Watt/m ² 40.000-50.000 lux/3.500-4.500 f.c.
7-12	day 8-18°C night 8-12°C	<80%	500-600 Watt/m ² 50.000-60.000 Lux/4.500-5.500 f.c.

Spacing

Ordinary pot size	7-21cm
Transplanted	25 plants per m ²
Spaced	16 plants per m ²

Finishing

After 10 to 12 weeks of planting, all flowers will be blooming
